06/2018

Safety means Quality means Competitivity

In the chemical sector, being **competitive** implies working with the **highest quality standards**. **Safety** is the highest of them.

Technology can help.

Changing driver behaviour

Driver attitude can be improved with a **close leadership**, **experienced training**, and the continuous use of the right **information**.

Self-motivation **exists**.

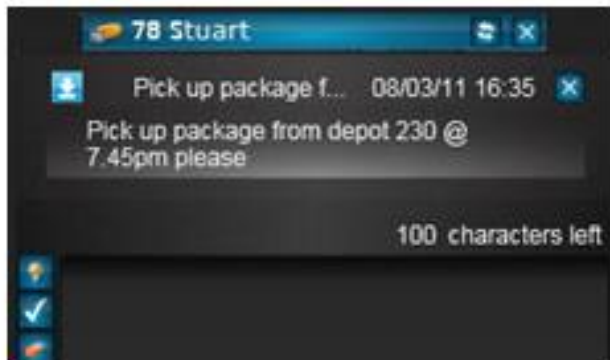

Real time data helps managers to **interact** more often and to **lead by facts**. It increases **awareness**, and enhances **attitude**.

Improvement is immediate.

Unifying driver messaging and media transfer

Tracking driving status,
blocking messages when driving

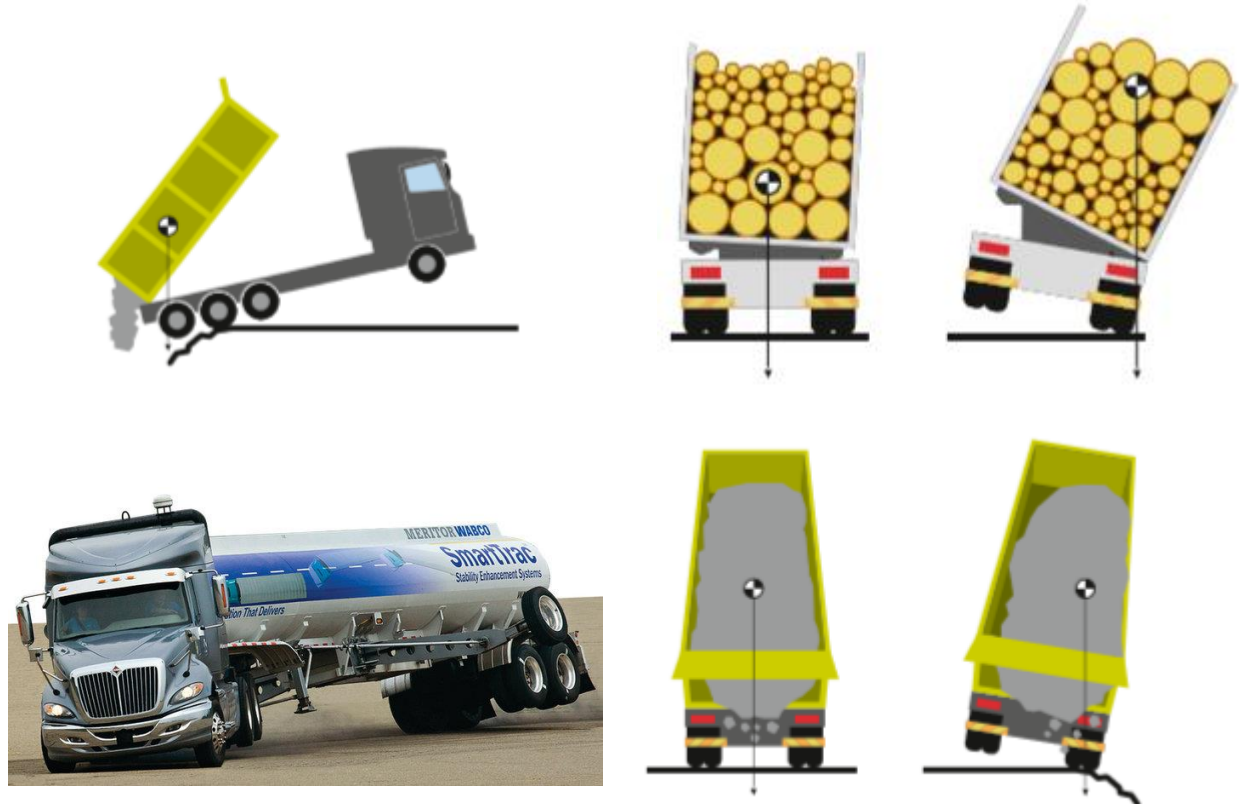

Face and eye tracking algorithms measure eyelid closure, **blink rate** and **head position** of the driver.

Alerting the driver with an **audio** tone and **vibrating** seat.

Using Knorr-Bremse
and Wabco TEBS to
manage Roll Over
Prevention through
EBS-EBS systems

Lone working

A lone worker will never be alone...

Thanks you!
